

1. Create an account on github.com. For this document I'll assume your username is adam_smith
2. Create your GitHub Pages repository and name it username.github.io (e.g. adam_smith.github.io)
3. Open the repository and click settings (See first reference for pictures, this may not be necessary)
 - a. Choose any theme in the GitHub Pages section.
4. Go to the main page for the repository (github.com/adam_smith/adam_smith.github.io).
 - a. Click Upload Files.
 - b. Select your paper (e.g. the_wealth_of_nations.pdf).
 - c. Click Commit Changes.
5. Your file is now available at adam_smith.github.io/the_wealth_of_nations.pdf.
6. Update the links on your website.

Final Note: You can run your entire website from github pages with a small amount of knowledge of web design. Paul Goldsmith-Pinkham's page <https://github.com/paulgp/paulgp.github.io> is a great starting point. You can also use GitHub pages with a custom domain. My website, Dominic-smith.com, is hosted on GitHub Pages.
